hhub

Built with Next.js project bootstrapped with `create-next-app`.

Description

This is the frontend of the Harmony Hub application created by Team Musico for Senior CSCE 482 Capstone Spring 2022. Visit our final product here. The code contains advanced React components such as a DAW, draggable music layers, an adjustable timeline, and live socket updates. It is open source so feel free to make adjustments, spin-offs, and improvments.

Spin up Locally

1. Get the `env.local` environment file from a team member

2. Install Node Modules

```
npm install
```

3. Run the development server

```
npm run dev
```

4. Visit the site in web browser

Localhost Port 3000

Spin up Production

Use the Vercel Platform from the creators of Next.js.

Check out the Next.js deployment documentation for more details.

More about Next.js for developers

You can start editing the home page by modifying `pages/index.tsx`. The page auto-updates as you edit the file.

The `pages/api` directory is mapped to `/api/*`. Files in this directory are treated as API routes instead of React pages.

Learn More

To learn more about Next.js, take a look at the following resources:

- Next.js Documentation - learn about Next.js features and API.

- Learn Next.js - an interactive Next.js tutorial.
